

CONTACTLESS REPLENISHMENT

OPTIMISE YOUR INVENTORY WITH OPTIMAS

Do you spend too much time looking for fasteners? Would you like your excess inventory reduced?

The safety of our working environment is at the forefront of everyone's minds right now, along with the need to find efficiencies to combat the ever increasing pressure from the global pandemic. Optimas are excited to be offering you a CONTACTLESS, self-service managed inventory system.

Optimas will provide you with everything you need to manage your fastener and component parts in the most efficient and safe way, keeping your employees safe and helping you to save time and money.

THE SETUP

THE PROCESS

Parts Identified

Built Offsite

Delivered,
Ready To Go

Safe. Easy. Fast.

THE BENEFITS

Covid Secure

Protect your staff and ours. No Optimas staff needed in your buildings.

Brexit Beating

On-shore your supply of all fasteners and components avoiding future lead-time and tariff/duty uncertainty.

Efficiency Gains and Soft Cost-Saving

Consolidation of orders and invoices to one supply partner.

One Kit

Technology, racks, bins & infrastructure supplied by Optimas (dependent on service agreement type).

“By partnering with Optimas, I now have control and full visibility of our inventory which allows me to make the right decision at the right time. I also have the ability to focus my team on those tasks where we can really make a difference.”

Rogelio Martínez, Materials Manager, EZI Metales

THE SYSTEMS

OptiBeam

Uses the latest in scanning and barcode technology for easy inventory replenishment. Our scanners allow Optimas or the customer to check inventory levels and send orders instantly. The scanner includes auditing software so you can search parts, validate bin location and set optimal re-order/unit pack sizes.

OptiRack

Uses advanced radio-frequency identification (RFID) technology to automate inventory replenishment. When empty bins are placed on an RFID mat on the rack shelf, it detects the RFID chip embedded in the bin label and then wirelessly triggers an order. OptiRack can be set up in any designated area - a supermarket, area rack or at the point of use.

OptiDrop

Uses advanced RFID technology to automate inventory replenishment. Each bin has a unique card with an RFID embedded chip. When the bin is empty or low, simply remove the card and place it inside the OptiDrop box to wirelessly trigger an order. OptiDrop can be placed at any location inside the plant.

OptiScale

Uses the latest weighing technology to measure real-time inventory status down to the part quantity level in a bin. Embedded sensors monitor the weight capacity and then automatically trigger orders based on pre-defined min/max levels and re-order unit pack sizes. Stock levels can be accessed 24/7/365. OptiScale can be configured in a bin, shelf or container.

OptiZone

Uses advanced RFID technology to automate inventory replenishment. An RFID antenna points to a designated area - a pallet, cage, gaylord container or bulk area. When an empty bin is placed in that area, the antenna detects the RFID chip embedded in the bin label and then wirelessly triggers an order.

YOUR QUESTIONS, OUR ANSWERS

What parts can Optimas manage for me?

We'll take over the management of your fasteners and components. Whether the fasteners are manufactured by Optimas, sourced through Optimas, customer-directed or customer-owned.

Who orders and replenishes parts?

You can select a full-service or self-managed program. In our full-service program, Optimas delivers and fill the bins at a scheduled time, or has an onsite Optimas team member or in-plant store replenish the inventory. In our self-managed program, Optimas ships parts directly to your dock, and your staff fill the bins.

How are parts deployed?

Parts can be deployed to multiple areas within your plant to ensure maximum efficiency:

SUPERMARKET - Stock is delivered to a single location

AREA RACKS - Stock is delivered to designated area(s) close to the point of use

DIRECT TO THE LINE - Stock is delivered to the point of use

What customer support will be provided?

Each VMI Program has an Optimas customer service representative who monitors the flow of your transactions and parts to ensure there is zero disruption to your line. For additional support, you can also call our JIT 24-hour hotline.
